

AI & Software Developer creating intelligent, data-driven solutions for real-world impact.

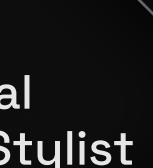

Hamna Nouman

Passionate about building intelligent systems using AI, deep learning, and full-stack technologies. I love designing data-driven applications that blend innovation with real-world impact.

SPECIALITY

My specialities

AI & Machine Learning

Artificial Intelligence
Machine Learning Models
Deep Learning & Neural Networks

Software & Web Development

Full-Stack Web Development
React.js & Flask Apps
RESTful APIs & Firebase Integration

Computer Vision & NLP

Computer Vision
Natural Language Processing
Image Recognition Systems

PROJECTS

My Projects

Virtual Fashion Stylist

Semantic Web AI Assistant

Image Forgery Detection with GUI

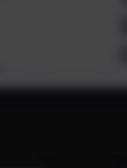

Instagram Clone App

Quiz Desktop App

Face Detection Attendance App

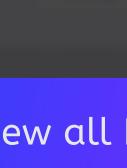

SERVICES

My other services

Digital branding

ABOUT ME

About Me

I'm an Artificial Intelligence undergraduate with a strong foundation in machine learning, computer vision, and full-stack development. I specialize in building intelligent, data-driven applications that merge creativity with functionality. From developing deep learning models and automation systems to designing responsive web and mobile interfaces, I enjoy turning ideas into real-world tech solutions. I'm passionate about continuous learning, collaboration, and using technology to make meaningful impact.

SKILLS

My Skills

UI/UX Design & Prototyping

I design intuitive, responsive user interfaces using Figma and Adobe XD. My approach blends creativity with usability to ensure every product looks great and feels effortless to use.

Full-Stack Web Development

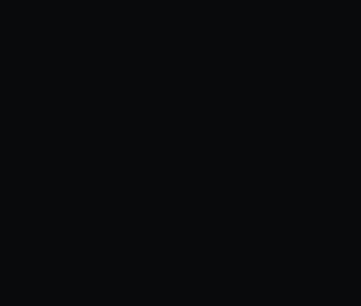

I build scalable, user-friendly web applications using React.js, Flask, and Firebase. I focus on combining clean UI design with efficient backend logic for seamless digital experiences.

Data Science & Analytics

I specialize in extracting insights from data using Python, Pandas, and Power BI. My projects include time-series forecasting with SARIMA and data visualization dashboards that support intelligent decision-making.

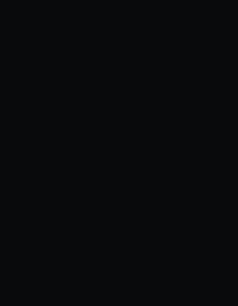

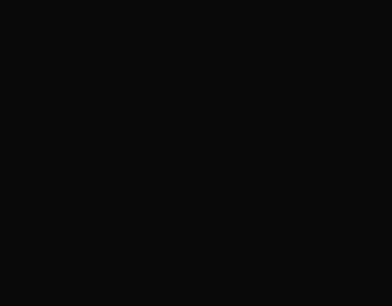

Natural Language Processing

I create smart text-based systems using tools like Word2Vec, BERT, and TF-IDF. My work includes document retrieval systems and semantic search engines that understand language context.

Have any project idea?
